

# What you should know about KYBELLA®

## What is KYBELLA®?

KYBELLA® is a prescription medicine used in adults and individually tailored to permanently destroy fat cells and improve the appearance and profile of moderate to severe fat below the chin (submental fat), also called “double chin. It is not known if KYBELLA® is safe and effective for use outside of the submental area or in children less than 18 years of age. Multiple treatments are usually required and will be given at least 1 month apart.

## Important Safety Information

### Who should not receive KYBELLA®?

You should not receive KYBELLA® if you have an infection in the treatment area.

**Before receiving KYBELLA®, tell your healthcare provider about all of your medical conditions, including if you:** Have had or plan to have surgery on your face, neck, or chin; have had cosmetic treatments on your face, neck, or chin; have had or have medical conditions in or near the neck area; have had or have trouble swallowing; have bleeding problems; are pregnant or plan to become pregnant (it is not known if KYBELLA® will harm your unborn baby); are breastfeeding or plan to breastfeed (it is not known if KYBELLA® passes into your breast milk; talk to your healthcare provider about the best way to feed your baby if you receive KYBELLA®).

**Tell your healthcare provider about all the medicines you take,** including prescription and over-the-counter medicines, vitamins, and herbal supplements. Especially tell your healthcare provider if you take a medicine that prevents the clotting of your blood (antiplatelet or anticoagulant medicine).

## AFTER TREATMENT: What to expect

### Swelling

- For most patients, swelling is likely
- In clinical studies, most reported cases of swelling were mild to moderate and lasted a median of 11 days (range 1-218 days)
- Common treatment-area side effects, including swelling, generally became less severe and happened less often with each following treatment session in clinical studies
- Consider any upcoming social plans and work commitments following your treatment

### Other possible side effects

- Sometimes serious side effects can occur, including nerve injury in the jaw (which can cause an uneven smile or facial muscle weakness) or trouble swallowing
- Besides swelling, other common side effects include bruising, pain, numbness, redness, and areas of hardness in the treatment area
- ❖ These are not all the side effects of KYBELLA®.
